

Run pintos in your Ubuntu

1. Download bochs and pintos

- i. download bochs-2.6.7.tar.gz
- i. download pintos.tar.gz

2. Use the tar command to decompress two files separately

```
tar -zxvf bochs-2.6.7.tar.gz
tar -zxvf pintos.tar.gz
```

3. Install the following software

```
sudo apt-get install build-essential
sudo apt-get install xorg-dev
sudo apt-get install bison
sudo apt-get install libgtk2.0-dev
```

4. Install bochs

```
cd bochs-2.6.7
./configure --with-nogui --enable-gdb-stub
make
sudo make install
```

test bochs

```
bochs --version
```

```

=====
Bochs x86 Emulator 2.6.7
Built from SVN snapshot on November 2, 2014
Compiled on Mar 13 2018 at 17:35:28
=====
Usage: bochs [flags] [bochsrc options]

-n          no configuration file
-f configfile  specify configuration file
-q          quick start (skip configuration interface)
-benchmark N  run bochs in benchmark mode for N millions of emulated ticks
-dumpstats N  dump bochs stats every N millions of emulated ticks
-r path       restore the Bochs state from path
-log filename specify Bochs log file name
--help       display this help and exit
--help features display available features / devices and exit
--help cpu   display supported CPU models and exit

For information on Bochs configuration file arguments, see the
bochsrc section in the user documentation or the man page of bochsrc.
000000000000p[      ] >>PANIC<< command line arg '--version' was not understood
=====
Bochs is exiting with the following message:
[      ] command line arg '--version' was not understood
=====
000000000000i[SIM    ] quit_sim called with exit code 1

```

5. Running pintos on bochs

```

cd pintos/src/threads
make
cd build
../../utils/pintos run alarm-multiple

```

```
squish-pty bochs -q
```

```
